ETF Summary

Investment Objective

Vanguard Tax-Managed International Fund seeks to provide a tax-efficient investment return consisting of long-term capital appreciation.

Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold ETF Shares of the Fund.

Shareholder Fees

(Fees paid directly from your investment)

Transaction Fee on Purchases and Sales	None through Vanguard (Broker fees vary)
Transaction Fee on Reinvested Dividends	None through Vanguard (Broker fees vary)
Transaction Fee on Conversion to ETF Shares	None through Vanguard (Broker fees vary)

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Expenses	0.07%
12b-1 Distribution Fee	None
Other Expenses	0.05%
Total Annual Fund Operating Expenses	0.12%

Example

The following example is intended to help you compare the cost of investing in MSCI EAFE ETF with the cost of investing in other funds. It illustrates the hypothetical expenses that you would incur over various periods if you invest \$10,000 in MSCI EAFE ETF. This example assumes that MSCI EAFE ETF Shares provide a return of 5% a year and that operating expenses remain as stated in the preceding table. The results apply whether or not you redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$12	\$39	\$68	\$154

This example does not include the brokerage commissions that you may pay to buy and sell ETF Shares of the Fund.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the previous expense example, reduce the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 6%.

Primary Investment Strategies

The Fund purchases stocks included in the MSCI EAFE Index, which is made up of approximately 970 common stocks of companies located in 22 countries in Europe, Australia, Asia, and the Far East. The Fund uses statistical methods to “sample” the Index, aiming to closely track its investment performance while limiting investments in Index securities that have undesirable tax characteristics in an attempt to minimize taxable income distributions.

Primary Risks

An investment in the Fund could lose money over short or even long periods. You should expect the Fund’s share price and total return to fluctuate within a wide range, like the fluctuations of global stock markets. The Fund’s performance could be hurt by:

- *Stock market risk*, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices. The Fund’s investments in foreign stocks can be riskier than U.S. stock

investments. The prices of foreign stocks and the prices of U.S. stocks have, at times, moved in opposite directions. In addition, the Fund's benchmark index may, at times, become focused in stocks of a particular sector, category, or group of companies.

- *Country/regional risk*, which is the chance that world events—such as political upheaval, financial troubles, or natural disasters—will adversely affect the value of securities issued by companies in foreign countries or regions. Because the Fund may invest a large portion of its assets in securities of companies located in any one country or region, the Fund's performance may be hurt disproportionately by the poor performance of its investments in that area.

- *Currency risk*, which is the chance that the value of a foreign investment, measured in U.S. dollars, will decrease because of unfavorable changes in currency exchange rates.

Because ETF Shares are traded on an exchange, they are subject to additional risks:

- MSCI EAFE ETF Shares are listed for trading on NYSE Arca and can be bought and sold on the secondary market at market prices. Although it is expected that the market price of a MSCI EAFE ETF Share typically will approximate its net asset value (NAV), there may be times when the market price and the NAV differ significantly.

Thus, you may pay more or less than NAV when you buy MSCI EAFE ETF Shares on the secondary market, and you may receive more or less than NAV when you sell those shares.

- Although MSCI EAFE ETF Shares are listed for trading on NYSE Arca, it is possible that an active trading market may not be maintained.

- Trading of MSCI EAFE ETF Shares on NYSE Arca may be halted by the activation of individual or marketwide "circuit breakers" (which halt trading for a specific period of time when the price of a particular security or overall market prices decline by a specified percentage). Trading of MSCI EAFE ETF Shares may also be halted if (1) the shares are delisted from NYSE Arca without first being listed on another exchange or (2) NYSE Arca officials determine that such action is appropriate in the interest of a fair and orderly market or to protect investors.

An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Annual Total Returns

The following bar chart and table are intended to help you understand the risks of investing in the Fund. The bar chart shows how the performance of the Fund's ETF Shares (based on NAV) has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the ETF Shares compare with those of the Fund's benchmark index, which has investment characteristics similar to those of the Fund. MSCI EAFE Index returns are adjusted for withholding taxes applicable to Luxembourg holding companies. Keep in mind that the

Fund's past performance (before and after taxes) does not indicate how the Fund will perform in the future. Updated performance information is available on our website at vanguard.com/performance or by calling Vanguard toll-free at 800-662-7447.

Annual Total Returns – Vanguard Tax-Managed International Fund ETF Shares

During the periods shown in the bar chart, the highest return for a calendar quarter was 25.41% (quarter ended June 30, 2009), and the lowest return for a quarter was -19.01% (quarter ended December 31, 2008).

Average Annual Total Returns for Periods Ended December 31, 2010

	1 Year	Since Inception (Jul. 20, 2007)
Vanguard Tax-Managed International Fund ETF Shares		
<i>Based on NAV</i>		
Return Before Taxes	8.47%	-6.22%
Return After Taxes on Distributions	8.23	-6.48
Return After Taxes on Distributions and Sale of Fund Shares	6.18	-5.09
<i>Based on Market Price</i>		
Return Before Taxes	8.43	-6.19
MSCI EAFE Index (reflects no deduction for fees or expenses)	7.75%	-6.71%

Actual after-tax returns depend on your tax situation and may differ from those shown in the preceding table. When after-tax returns are calculated, it is assumed that the shareholder was in the highest individual federal marginal income tax bracket at the time of each distribution of income or capital gains or upon redemption. State and local

income taxes are not reflected in the calculations. Please note that after-tax returns are not relevant for a shareholder who holds fund shares in a tax-deferred account, such as an individual retirement account or a 401(k) plan. Also, figures captioned *Return After Taxes on Distributions and Sale of Fund Shares* will be higher than other figures for the same period if a capital loss occurs upon redemption and results in an assumed tax deduction for the shareholder.

Investment Advisor

The Vanguard Group, Inc.

Portfolio Manager

Donald M. Butler, CFA, Principal of Vanguard. He has managed the Fund since 2008.

Purchase and Sale of Fund Shares

You can buy and sell ETF Shares of the Fund through a brokerage firm. The firm may charge you a commission to execute the transaction. Unless imposed by your brokerage firm, there is no minimum dollar amount you must invest and no minimum number of shares you must buy. The price you pay or receive for ETF Shares will be the prevailing market price, which may be more or less than the NAV of the shares.

ETF Shares of the Fund cannot be purchased or redeemed directly with the Fund, except by certain authorized broker-dealers. These broker-dealers may purchase and redeem ETF Shares only in large blocks (Creation Units) worth several million dollars, and only in exchange for baskets of securities rather than cash. For this Fund, the number of ETF Shares in a Creation Unit is 500,000.

Tax Information

The Fund's distributions may be taxable as ordinary income or capital gain. A sale of ETF Shares is a taxable event, which means that you may have a capital gain to report as income, or a capital loss to report as a deduction, when you complete your federal income tax return. Dividend and capital gain distributions that you receive, as well as your gains or losses from any sale of ETF Shares, may also be subject to state and local income taxes.

Payments to Financial Intermediaries

The Fund and its investment advisor do not pay financial intermediaries for sales of Fund shares.

Investing in Vanguard ETF® Shares

What Are Vanguard ETF Shares?

Vanguard ETF Shares are an exchange-traded class of shares issued by certain Vanguard mutual funds. ETF Shares represent an interest in the portfolio of stocks or bonds held by the issuing fund. This prospectus describes MSCI EAFE ETF, a class of shares issued by Vanguard Tax-Managed International Fund. In addition to ETF Shares, the Fund offers two conventional (not exchange-traded) classes of shares. This prospectus, however, relates only to ETF Shares.

How Are Vanguard ETF Shares Different From Conventional Mutual Fund Shares?

Conventional mutual fund shares are bought from and redeemed with the issuing fund for cash at the net asset value (NAV), typically calculated once a day. ETF Shares, by contrast, cannot be purchased from or redeemed with the issuing fund by an individual investor.

An organized secondary trading market is expected to exist for ETF Shares, unlike conventional mutual fund shares, because ETF Shares are listed for trading on a national securities exchange. Investors can purchase and sell ETF Shares on the secondary market through a broker. Secondary-market transactions occur not at NAV, but at market prices that change throughout the day, based on the supply of, and demand for, ETF Shares and on changes in the prices of the fund's portfolio holdings.

The market price of a fund's ETF Shares typically will differ somewhat from the NAV of those shares. The difference between market price and NAV is expected to be small most of the time, but in times of extreme market volatility the difference may become significant.

How Do I Buy and Sell Vanguard ETF Shares?

Individual investors can purchase ETF Shares on the secondary market through a broker. When you buy or sell ETF Shares, your broker may charge a commission. You will also incur the cost of the "bid-asked spread," which is the difference between the price a dealer will pay for a security and the somewhat higher price at which the dealer will sell the same security. In addition, because secondary-market transactions occur at market prices, you may pay more or less than NAV when you buy ETF Shares, and receive more or less than NAV when you sell those shares.

Your ownership of ETF Shares will be shown on the records of the broker through which you hold the shares. Vanguard will not have any record of your ownership. Your account information will be maintained by your broker, which will provide you with account statements, confirmations of your purchases and sales of ETF Shares, and tax information. Your broker also will be responsible for distributing income and capital gains distributions and for ensuring that you receive shareholder reports and other communications from the fund whose ETF Shares you own. You will receive other services (e.g., dividend reinvestment and average cost information) only if your broker offers these services.

More on the Fund and ETF Shares

This prospectus describes the primary risks you would face as a Fund shareholder. It is important to keep in mind one of the main axioms of investing: The higher the risk of losing money, the higher the potential reward. The reverse, also, is generally true: The lower the risk, the lower the potential reward. As you consider an investment in any mutual fund, you should take into account your personal tolerance for fluctuations in the securities markets. Look for this  symbol throughout the prospectus. It is used to mark detailed information about the more significant risks that you would confront as a Fund shareholder. To highlight terms and concepts important to mutual fund investors, we have provided Plain Talk® explanations along the way. Reading the prospectus will help you decide whether the Fund is the right investment for you. We suggest that you keep this prospectus for future reference.

Share Class Overview

This prospectus offers the Fund's ETF Shares, an exchange-traded class of shares. A separate prospectus offers the Fund's Admiral™ Shares, which have an investment minimum of \$10,000. Another prospectus offers the Fund's Institutional Shares, which are generally for investors who invest a minimum of \$5 million.

All share classes offered by a Fund have the same investment objective, strategies, and policies. However, different share classes have different expenses; as a result, their investment performances will differ.

A Note to Investors

Vanguard ETF Shares can be purchased directly from the issuing Fund only in exchange for a basket of securities that is expected to be worth several million dollars. Most individual investors, therefore, will not be able to purchase ETF Shares directly from the Fund. Instead, these investors will purchase ETF Shares on the secondary market with the assistance of a broker.

Plain Talk About Costs of Investing

Costs are an important consideration in choosing a mutual fund. That's because you, as a shareholder, pay a proportionate share of the costs of operating a fund, plus any transaction costs incurred when the fund buys or sells securities. These costs can erode a substantial portion of the gross income or the capital appreciation a fund achieves. Even seemingly small differences in expenses can, over time, have a dramatic effect on a fund's performance.

The following sections explain the primary investment strategies and policies that the Fund uses in pursuit of its objective. The Fund's board of trustees, which oversees the Fund's management, may change investment strategies or policies in the interest of

shareholders without a shareholder vote, unless those strategies or policies are designated as fundamental. Note that the Fund's investment objective is not fundamental and may be changed without a shareholder vote.

Market Exposure

The Fund seeks to provide tax-efficient investment returns consisting of long-term capital appreciation by investing in a broadly diversified group of foreign stocks.

The Fund is subject to stock market risk, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices. The Fund's investments in foreign stocks can be riskier than U.S. stock investments. The prices of foreign stocks and the prices of U.S. stocks have, at times, moved in opposite directions. In addition, the Fund's benchmark index may, at times, become focused in stocks of a particular sector, category, or group of companies.

Plain Talk About International Investing

U.S. investors who invest abroad will encounter risks not typically associated with U.S. companies, because foreign stock and bond markets operate differently from the U.S. markets. For instance, foreign companies are not subject to the same accounting, auditing, and financial-reporting standards and practices as U.S. companies, and their stocks may not be as liquid as those of similar U.S. firms. In addition, foreign stock exchanges, brokers, and companies generally have less government supervision and regulation than their counterparts in the United States. These factors, among others, could negatively affect the returns U.S. investors receive from foreign investments.

The Fund is subject to country/regional risk and currency risk. Country/regional risk is the chance that world events—such as political upheaval, financial troubles, or natural disasters—will adversely affect the value of securities issued by companies in foreign countries or regions. Because the Fund may invest a large portion of its assets in securities of companies located in any one country or region, its performance may be hurt disproportionately by the poor performance of its investments in that area. Currency risk is the chance that the value of a foreign investment, measured in U.S. dollars, will decrease because of unfavorable changes in currency exchange rates.

When the U.S. dollar rises in value versus another currency, returns from foreign stocks are reduced because a given sum in foreign currency translates into fewer U.S. dollars. Conversely, a decline in the U.S. dollar enhances returns from foreign stocks.

International investing involves other risks and considerations, including: generally higher costs for trading securities; foreign withholding taxes payable on the Fund's securities, which can reduce dividend income available to distribute to shareholders; and adverse changes in regulatory or legal climates.

To illustrate the volatility of international stock prices, the following table shows the best, worst, and average annual total returns for foreign stock markets over various periods as measured by the MSCI EAFE Index, a widely used barometer of international market activity. (Total returns consist of dividend income plus change in market price.) Note that the returns shown do not include the costs of buying and selling stocks or other expenses that a real-world investment portfolio would incur.

International Stock Market Returns
(1970–2010)

	1 Year	5 Years	10 Years	20 Years
Best	69.4%	36.1%	22.0%	15.5%
Worst	-43.4	-2.9	0.8	3.1
Average	11.8	10.4	10.7	11.2

The table covers all of the 1-, 5-, 10-, and 20-year periods from 1970 through 2010. These average returns reflect *past* performance of international stocks; you should not regard them as an indication of *future* performance of either foreign markets as a whole or ETF Shares in particular.

Because the MSCI EAFE Index tracks the European and Pacific developed markets collectively, the returns in the preceding table do not reflect the variability of returns for these markets individually. To illustrate this variability, the following table shows returns for different international markets—as well as for the U.S. market for comparison—from 2001 through 2010, as measured by their respective indexes.

Returns for Various Stock Markets¹

	European Market ²	Pacific Market ²	U.S. Market
2001	-19.90%	-25.40%	-11.89%
2002	-18.38	-9.29	-22.10
2003	38.54	38.48	28.68
2004	20.88	18.98	10.88
2005	9.42	22.64	4.91
2006	33.72	12.20	15.79
2007	13.86	5.30	5.49
2008	-46.42	-36.42	-37.00
2009	35.83	24.18	26.46
2010	3.88	15.92	15.06

¹ European market returns are measured by the MSCI Europe Index; Pacific market returns are measured by the MSCI Pacific Index; and U.S. market returns are measured by the Standard & Poor's 500 Index.

² MSCI Index returns are adjusted for withholding taxes applicable to Luxembourg holding companies.

Keep in mind that these returns reflect *past* performance of the various indexes; you should not consider them as an indication of *future* performance of the indexes, or of the Tax-Managed International Fund in particular.

Stocks of publicly traded companies and funds that invest in stocks are often classified according to market value, or market capitalization. These classifications typically include small-cap, mid-cap, and large-cap. It's important to understand that, for both companies and stock funds, market-capitalization ranges change over time. Also, interpretations of size vary, and there are no "official" definitions of small-, mid-, and large-cap, even among Vanguard fund advisors. The Fund is dominated by large- and mid-cap foreign companies. The asset-weighted median market capitalization of the Fund as of December 31, 2010, was \$35.7 billion.

The Fund is subject to investment style risk, which is the chance that returns from the types of stocks in which the Fund invests will trail returns from the overall stock market. Specific types of stocks tend to go through cycles of doing better—or worse—than the stock market in general. These periods have, in the past, lasted for as long as several years.

Security Selection

The Fund employs an index-oriented approach to stock investing, and the only stocks purchased by a Fund are those of issuers included in the MSCI EAFE Index. The Fund uses statistical methods to “sample” the Index, aiming to closely track its investment performance while limiting investments in Index securities that have undesirable tax characteristics in an attempt to minimize taxable income distributions.

Other Investment Policies and Risks

The Fund may invest, to a limited extent, in derivatives. Generally speaking, a derivative is a financial contract whose value is based on the value of a financial asset (such as a stock, bond, or currency), a physical asset (such as gold, oil, or wheat), or a market index (such as the S&P 500[®] Index). Investments in derivatives may subject the Fund to risks different from, and possibly greater than, those of the underlying securities, assets, or market indexes. The Fund will not use derivatives for speculation or for the purpose of leveraging (magnifying) investment returns.

The Fund may enter into forward foreign currency exchange contracts, which are a type of derivative, to help protect its holdings against unfavorable changes in exchange rates. A forward foreign currency exchange contract is an agreement to buy or sell a country’s currency at a specific price on a specific date, usually 30, 60, or 90 days in the future. In other words, the contract guarantees an exchange rate on a given date. The Fund may use these contracts to gain currency exposure when investing in stock index futures and to settle trades in a foreign currency. These contracts, however, would not prevent the Fund’s securities from falling in value during foreign market downswings.

Vanguard may invest a small portion of Fund assets in stock index futures, which are a type of derivative, and/or shares of exchange-traded funds (ETFs), including ETF Shares issued by Vanguard stock funds. Stock index futures and ETFs provide returns similar to those of common stocks. Vanguard may purchase futures or ETFs when doing so will reduce the Fund’s transaction costs or provide flexibility for the Fund to seek better tax efficiency. Vanguard receives no additional revenue from investing Fund assets in ETF Shares of other Vanguard funds. Fund assets invested in ETF Shares are excluded when allocating to the Fund its share of the costs of Vanguard operations.

Cash Management

The Fund’s daily cash balance may be invested in one or more Vanguard CMT Funds, which are very low-cost money market funds. When investing in a Vanguard CMT Fund, the Fund bears its proportionate share of the at-cost expenses of the CMT Fund in which it invests.

Temporary Investment Measures

The Fund may temporarily depart from its normal investment policies and strategies when doing so is believed to be in the Fund's best interest, so long as the alternative is consistent with the Fund's investment objective. For instance, the Fund may invest beyond the normal limits in derivatives or ETFs that are consistent with the Fund's objective when those instruments are more favorably priced or provide needed liquidity, as might be the case when the Fund receives large cash flows that it cannot prudently invest immediately.

In addition, the Fund may take temporary defensive positions that are inconsistent with its normal investment policies and strategies—for instance, by allocating substantial assets to cash, commercial paper, or other less volatile instruments—in response to adverse or unusual market, economic, political, or other conditions. In doing so, the Fund may succeed in avoiding losses but may otherwise fail to achieve its investment objective.

Special Risks of Exchange-Traded Shares

ETF Shares are not individually redeemable. They can be redeemed with the issuing Fund at NAV only in large blocks known as Creation Units, which would cost millions of dollars to assemble.

The market price of ETF Shares may differ from NAV. Vanguard ETF Shares are listed for trading on a national securities exchange and can be bought and sold on the secondary market at market prices. Although it is expected that the market price of an ETF Share typically will approximate its NAV, there may be times when the market price and the NAV differ significantly. Thus, you may pay more or less than NAV when you buy ETF Shares on the secondary market, and you may receive more or less than NAV when you sell those shares.

The market price of ETF Shares, like the price of any exchange-traded security, includes a "bid-asked spread" charged by the exchange specialist and other market-makers that cover the particular security. In times of severe market disruption, the bid-asked spread can increase significantly. This means that ETF Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest, when the price of ETF Shares is falling fastest—and this may be the time that you most want to sell ETF Shares.

Vanguard's website at vanguard.com shows the previous day's closing NAV and closing market price for the Fund's ETF Shares. The website also discloses, in the **Premium/Discount Analysis** section of the ETF Shares' Performance page, how frequently the Fund's ETF Shares traded at a premium or discount to NAV (based on closing NAVs and market prices) and the magnitudes of such premiums and discounts.

An active trading market may not exist. Although Vanguard ETF Shares are listed on a national securities exchange, it is possible that an active trading market may not be maintained.

Trading may be halted. Trading of Vanguard ETF Shares on an exchange may be halted by the activation of individual or marketwide “circuit breakers” (which halt trading for a specific period of time when the price of a particular security or overall market prices decline by a specified percentage). Trading of ETF Shares may also be halted if (1) the shares are delisted from the listing exchange without first being listed on another exchange or (2) exchange officials determine that such action is appropriate in the interest of a fair and orderly market or to protect investors.

Purchasing and Selling Vanguard ETF Shares on the Secondary Market

You can buy and sell ETF Shares on the secondary market in the same way you buy and sell any other exchange-traded security—through a broker. The broker may charge you a commission to execute the transaction. The price at which you buy or sell ETF Shares (i.e., the market price) may be more or less than the NAV of the shares. Unless imposed by your broker, there is no minimum dollar amount you must invest and no minimum number of ETF Shares you must buy.

Conversion Privilege

Owners of conventional shares issued by the Fund may convert those shares to ETF Shares of equivalent value of the same fund. *Please note that investors who own conventional shares through a 401(k) plan or other employer-sponsored retirement or benefit plan may not convert those shares to ETF Shares.* Vanguard Brokerage Services® (Vanguard Brokerage) does not impose a fee on conversions from Vanguard conventional shares to Vanguard ETF Shares. However, other brokerage firms may charge a fee to process a conversion. Vanguard reserves the right, in the future, to impose a transaction fee on conversions or to limit or terminate the conversion privilege. ETF Shares, whether acquired through a conversion or purchased on the secondary market, cannot be converted to conventional shares. Similarly, ETF Shares of one fund cannot be exchanged for ETF Shares of another fund.

You must hold ETF Shares in a brokerage account. Thus, before converting conventional shares to ETF Shares, you must have an existing, or open a new, brokerage account. To initiate a conversion of conventional shares to ETF Shares, please contact your broker.

Converting conventional shares to ETF Shares generally is accomplished as follows. First, after your broker notifies Vanguard of your request to convert, Vanguard will transfer your conventional shares from your account to the broker’s omnibus account with Vanguard (an account maintained by the broker on behalf of all its customers

who hold conventional Vanguard fund shares through the broker). After the transfer, Vanguard's records will reflect your broker, not you, as the owner of the shares. Next, your broker will instruct Vanguard to convert the appropriate number or dollar amount of conventional shares in its omnibus account to ETF Shares of equivalent value, based on the respective NAVs of the two share classes.

Your Fund's transfer agent will reflect ownership of all ETF Shares in the name of the Depository Trust Company (DTC). The DTC will keep track of which ETF Shares belong to your broker, and your broker, in turn, will keep track of which ETF Shares belong to you.

Because the DTC is unable to handle fractional shares, only whole shares will be converted. For example, if you owned 300.250 conventional shares, and this was equivalent in value to 90.750 ETF Shares, the DTC account would receive 90 ETF Shares. Conventional shares worth 0.750 ETF Shares (in this example, that would be 2.481 conventional shares) would remain in the broker's omnibus account with Vanguard. Your broker then could either (1) credit your account with 0.750 ETF Shares rather than 2.481 conventional shares, or (2) redeem the 2.481 conventional shares at NAV, in which case you would receive cash in place of those shares. If your broker chooses to redeem your conventional shares, you will realize a gain or loss on the redemption that must be reported on your tax return (unless you hold the shares in an IRA or other tax-deferred account). Please consult your broker for information on how it will handle the conversion process, including whether it will impose a fee to process a conversion.

If you convert your conventional shares to ETF Shares through Vanguard Brokerage, *all* conventional shares for which you request conversion will be converted to ETF Shares of equivalent value. Because no fractional shares will have to be sold, the transaction will be 100% tax-free.

Here are some important points to keep in mind when converting conventional shares of a Vanguard fund to ETF Shares:

- The conversion process can take anywhere from several days to several weeks, depending on your broker. Vanguard generally will process conversion requests either on the day they are received or on the next business day. Vanguard imposes conversion blackout windows around the dates when a fund with ETF Shares declares dividends. This is necessary to prevent a shareholder from collecting a dividend from both the conventional share class currently held and also from the ETF share class to which the shares will be converted.
- Until the conversion process is complete, you will remain fully invested in a fund's conventional shares, and your investment will increase or decrease in value in tandem with the NAV of those shares.

- The conversion transaction is nontaxable except, if applicable, to the very limited extent previously described.
- If you have used the average cost basis method of accounting for your conventional mutual fund shares prior to converting them to ETF Shares, you are required to maintain the average cost basis method of accounting for your converted ETF Shares, unless you first obtain permission from the IRS to use a different method. However, since January 1, 2010, any new ETF Shares that you purchase into your account may be eligible for another IRS-approved method. Please contact your tax advisor to discuss your specific situation.

A precautionary note to investment companies: For purposes of the Investment Company Act of 1940, Vanguard ETF Shares are issued by registered investment companies, and the acquisition of such shares by other investment companies is subject to the restrictions of Section 12(d)(1) of that Act, except as permitted by an SEC exemptive order that allows registered investment companies to invest in the issuing funds beyond the limits of Section 12(d)(1), subject to certain terms and conditions.

Frequent Trading and Market-Timing

Unlike frequent trading of a Vanguard fund's conventional (i.e., not exchange-traded) classes of shares, frequent trading of ETF Shares does not disrupt portfolio management, increase the fund's trading costs, lead to realization of capital gains by the fund, or otherwise harm fund shareholders. The vast majority of trading in ETF Shares occurs on the secondary market. Because these trades do not involve the issuing fund, they do not harm the fund or its shareholders. A few institutional investors are authorized to purchase and redeem ETF Shares directly with the issuing fund. Because these trades are effected in-kind (i.e., for securities and not for cash), they do not cause any of the harmful effects to the issuing fund (as previously noted) that may result from frequent cash trades. For these reasons, the board of trustees of each fund that issues ETF Shares has determined that it is not necessary to adopt policies and procedures to detect and deter frequent trading and market-timing of ETF Shares. The broker through which you hold your ETF Shares, however, may place certain limits on your ability to purchase and/or sell ETF Shares over any given period.

Portfolio Holdings

We generally post on our website at *vanguard.com*, in the **Portfolio** section of the Fund's Portfolio & Management page, a detailed list of the securities held by the Fund as of the end of the most recent calendar quarter. This list is generally updated within 30 days after the end of each calendar quarter. Vanguard may exclude any portion of these portfolio holdings from publication when deemed in the best interest of the Fund. We also generally post the ten largest stock portfolio holdings of the Fund and the percentage of the Fund's total assets that each of these holdings represents, as of

the end of the most recent calendar quarter. This list is generally updated within 15 calendar days after the end of each calendar quarter. Please consult the Fund's *Statement of Additional Information* or our website for a description of the policies and procedures that govern disclosure of the Fund's portfolio holdings.

Turnover Rate

Although the Fund normally seeks to invest for the long term, it may sell securities regardless of how long they have been held. Generally, an index-oriented fund sells securities only in response to redemption requests or to adjust the number of shares held to reflect a change in the fund's target index. Turnover rates for large-cap stock index funds tend to be very low because large-cap indexes typically do not change significantly from year to year. Turnover rates for mid-cap and small-cap stock index funds tend to be higher (although still relatively low, compared with actively managed stock funds) because the indexes they track are the most likely to change as a result of companies merging, growing, or failing. The **Financial Highlights** section of this prospectus shows historical turnover rates for the Fund. A turnover rate of 100%, for example, would mean that the Fund had sold and replaced securities valued at 100% of its net assets within a one-year period. The average turnover rate for international stock funds was approximately 86%, as reported by Morningstar, Inc., on December 31, 2010.

Plain Talk About Turnover Rate

Before investing in a mutual fund, you should review its turnover rate. This gives an indication of how transaction costs, which are not included in the fund's expense ratio, could affect the fund's future returns. In general, the greater the volume of buying and selling by the fund, the greater the impact that brokerage commissions and other transaction costs will have on its return. Also, funds with high turnover rates may be more likely to generate capital gains that must be distributed to shareholders as taxable income.

The Fund and Vanguard

The Fund is a member of The Vanguard Group, a family of 37 investment companies with more than 170 funds holding assets of approximately \$1.5 trillion. All of the funds that are members of The Vanguard Group (other than funds of funds) share in the expenses associated with administrative services and business operations, such as personnel, office space, equipment, and advertising.

Vanguard also provides marketing services to the funds. Although shareholders do not pay sales commissions or 12b-1 distribution fees, each fund (other than a fund of

funds) or each share class of a fund (in the case of a fund with multiple share classes) pays its allocated share of The Vanguard Group's marketing costs.

Plain Talk About Vanguard's Unique Corporate Structure

The Vanguard Group is truly a *mutual* mutual fund company. It is owned jointly by the funds it oversees and thus indirectly by the shareholders in those funds. Most other mutual funds are operated by management companies that may be owned by one person, by a private group of individuals, or by public investors who own the management company's stock. The management fees charged by these companies include a profit component over and above the companies' cost of providing services. By contrast, Vanguard provides services to its member funds on an at-cost basis, with no profit component, which helps to keep the funds' expenses low.

Investment Advisor

The Vanguard Group, Inc. (Vanguard), P.O. Box 2600, Valley Forge, PA 19482, which began operations in 1975, serves as advisor to the Fund through its Quantitative Equity Group. As of December 31, 2010, Vanguard served as advisor for approximately \$1.3 trillion in assets. Vanguard manages the Fund on an at-cost basis, subject to the supervision and oversight of the trustees and officers of the Fund.

For the fiscal year ended December 31, 2010, the advisory expenses represented an effective annual rate of approximately 0.01% of the Fund's average net assets.

For a discussion of why the board of trustees approved the Fund's investment advisory arrangement, see the most recent semiannual report to shareholders covering the fiscal period ended June 30.

Vanguard's Quantitative Equity Group is overseen by:

George U. Sauter, Chief Investment Officer and Managing Director of Vanguard. As Chief Investment Officer, he is responsible for the oversight of Vanguard's Quantitative Equity and Fixed Income Groups. The investments managed by these two groups include active quantitative equity funds, equity index funds, active bond funds, index bond funds, stable value portfolios, and money market funds. Since joining Vanguard in 1987, Mr. Sauter has been a key contributor to the development of Vanguard's stock indexing and active quantitative equity investment strategies. He received his A.B. in Economics from Dartmouth College and an M.B.A. in Finance from the University of Chicago.

Sandip A. Bhagat, CFA, Principal of Vanguard and head of Vanguard's Quantitative Equity Group. He has oversight responsibility for all active quantitative equity funds and

all equity index funds managed by the Quantitative Equity Group. He has managed investment portfolios since 1987 and has been with Vanguard since 2009. He received his B.S. in Chemical Engineering from the University of Bombay, India, and an M.S. in Chemical Engineering and an M.B.A. from the University of Connecticut.

The manager primarily responsible for the day-to-day management of the Fund is:

Donald M. Butler, CFA, Principal of Vanguard. He has been with Vanguard since 1992; has managed investment portfolios since 1997; and has managed the Tax-Managed International Fund since 2008. Education: B.S.B.A., Shippensburg University.

The *Statement of Additional Information* provides information about the portfolio manager's compensation, other accounts under management, and ownership of shares of the Fund.

Dividends, Capital Gains, and Taxes

Fund Distributions

The Fund distributes to shareholders virtually all of its net income (interest and dividends, less expenses) as well as any net capital gains realized from the sale of its holdings. Distributions generally occur annually in December. In addition, the Fund may occasionally make a supplemental distribution at some other time during the year.

Plain Talk About Distributions

As a shareholder, you are entitled to your portion of a fund's income from interest and dividends as well as capital gains from the fund's sale of investments. Income consists of both the dividends that the fund earns from any stock holdings and the interest it receives from any money market and bond investments. Capital gains are realized whenever the fund sells securities for higher prices than it paid for them. These capital gains are either short-term or long-term, depending on whether the fund held the securities for one year or less or for more than one year.

Reinvestment of Distributions

In order to reinvest dividend and capital gains distributions, investors in the Fund's ETF Shares must hold their shares at a broker that offers a reinvestment service (either the broker's own service or a service made available by a third party, such as the broker's outside clearing firm or the Depository Trust Company (DTC)). If a reinvestment service is available, distributions of income and capital gains can automatically be reinvested in additional whole and fractional ETF Shares of the Fund. If a reinvestment service is not available, investors would receive their distributions in cash. To

determine whether a reinvestment service is available and whether there is a commission or other charge for using this service, consult your broker.

As with all exchange-traded funds, reinvestment of dividend and capital gains distributions in additional ETF Shares will occur four business days or more after the ex-dividend date (the date when a distribution of dividends or capital gains is deducted from the price of the Fund's shares). The exact number of days depends on your broker. During that time, the amount of your distribution will not be invested in the Fund and therefore will not share in the Fund's income, gains, and losses.

Basic Tax Points

Investors in taxable accounts should be aware of the following basic federal income tax points:

- Distributions are taxable to you whether or not you reinvest these amounts in additional ETF Shares.
- Distributions declared in December—if paid to you by the end of January—are taxable as if received in December.
- Any dividend and short-term capital gains distributions that you receive are taxable to you as ordinary income. If you are an individual and meet certain holding-period requirements with respect to your Fund shares, you may be eligible for reduced tax rates on "qualified dividend income," if any, distributed by the Fund.
- Any distributions of net long-term capital gains are taxable to you as long-term capital gains, no matter how long you've owned ETF Shares.
- Although the Fund seeks to minimize distributions of taxable capital gains, it may not always achieve this goal. Capital gains distributions may vary considerably from year to year as a result of the Fund's normal investment activities and cash flows.
- A sale of ETF Shares is a taxable event. This means that you may have a capital gain to report as income, or a capital loss to report as a deduction, when you complete your tax return.

Dividend and capital gains distributions that you receive, as well as your gains or losses from any sale of ETF Shares, may be subject to state and local income taxes.

The Fund may be subject to foreign taxes or foreign tax withholding on dividends, interest, and some capital gains that the Fund receives on foreign securities. You may qualify for an offsetting credit or deduction under U.S. tax laws for any amount designated as your portion of the Fund's foreign tax obligations, provided that you meet certain requirements. See your tax advisor or IRS publications for more information.

This prospectus provides general tax information only. If you are investing through a tax-deferred retirement account, such as an IRA, special tax rules apply. Please consult your tax advisor for detailed information about any tax consequences for you.

Share Price and Market Price

Share price, also known as *net asset value* (NAV), is calculated each business day as of the close of regular trading on the New York Stock Exchange, generally 4 p.m., Eastern time. Each share class has its own NAV, which is computed by dividing the total assets, minus liabilities, allocated to each share class by the number of Fund shares outstanding for that class. On holidays or other days when the Exchange is closed, the NAV is not calculated, and the Fund does not transact purchase or redemption requests. However, on those days the value of the Fund's assets may be affected to the extent that the Fund holds foreign securities that trade on foreign markets that are open.

Remember: If you buy or sell ETF Shares on the secondary market, you will pay or receive the market price, which may be higher or lower than NAV. Your transaction will be priced at NAV only if you purchase or redeem your ETF Shares in Creation Unit blocks, or if you convert your conventional fund shares to ETF Shares.

Stocks held by a Vanguard fund are valued at their *market value* when reliable market quotations are readily available. Certain short-term debt instruments used to manage a fund's cash are valued on the basis of amortized cost. The values of any foreign securities held by a fund are converted into U.S. dollars using an exchange rate obtained from an independent third party. The values of any mutual fund shares held by a fund are based on the NAVs of the shares. The values of any ETF or closed-end fund shares held by a fund are based on the market value of the shares.

When a fund determines that market quotations either are not readily available or do not accurately reflect the value of a security, the security is priced at its *fair value* (the amount that the owner might reasonably expect to receive upon the current sale of the security). A fund also will use fair-value pricing if the value of a security it holds has been materially affected by events occurring before the fund's pricing time but after the close of the primary markets or exchanges on which the security is traded. This most commonly occurs with foreign securities, which may trade on foreign exchanges that close many hours before the fund's pricing time. Intervening events might be: company-specific (e.g., earnings report, merger announcement), or country-specific or regional/global (e.g., natural disaster, economic or political news, act of terrorism, interest rate change). Intervening events include price movements in U.S. markets that are deemed to affect the value of foreign securities.

Fair value prices are determined by Vanguard according to procedures adopted by the board of trustees. When fair-value pricing is employed, the prices of securities used by a fund to calculate the NAV may differ from quoted or published prices for the same securities.

Vanguard's website will show the previous day's closing NAV and closing market price for the Fund's ETF Shares. The previous day's closing market price may also be published in the business section of major newspapers.

Financial Highlights

The following financial highlights table is intended to help you understand the ETF Shares' financial performance for the periods shown, and certain information reflects financial results for a single ETF Share. The total returns in the table represent the rate that an investor would have earned or lost each period on an investment in the ETF Shares (assuming reinvestment of all distributions). This information has been obtained from the financial statements audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, whose report—along with the Fund's financial statements—is included in the Fund's most recent annual report to shareholders. You may obtain a free copy of the latest annual or semiannual report online at vanguard.com or by contacting Vanguard by telephone or mail.

Plain Talk About How to Read the Financial Highlights Table

The ETF Shares began fiscal year 2010 with a net asset value (price) of \$34.06 per share. During the year, each ETF Share earned \$0.887 from investment income (interest and dividends) and \$1.99 from investments that had appreciated in value or that were sold for higher prices than the Fund paid for them.

Shareholders received \$0.897 per share in the form of dividend distributions. A portion of each year's distributions may come from the prior year's income or capital gains.

The share price at the end of the year was \$36.04, reflecting earnings of \$2.877 per share and distributions of \$0.897 per share. This was an increase of \$1.98 per share (from \$34.06 at the beginning of the year to \$36.04 at the end of the year). For a shareholder who reinvested the distributions in the purchase of more shares, the total return was 8.47% for the year.

As of December 31, 2010, the ETF Shares had approximately \$5.4 billion in net assets. For the year, the expense ratio was 0.12% (\$1.20 per \$1,000 of net assets), and the net investment income amounted to 2.76% of average net assets. The Fund sold and replaced securities valued at 6% of its net assets.

Glossary of Investment Terms

Active Management. An investment approach that seeks to exceed the average returns of a particular financial market or market segment. Active managers rely on research, market forecasts, and their own judgment and experience in selecting securities to buy and sell.

Authorized Participant. Institutional investors that are permitted to purchase Creation Units directly from, and redeem Creation Units directly with, the issuing fund. To be an Authorized Participant, an entity must be a participant in the Depository Trust Company and must enter into an agreement with the fund's Distributor.

Bid-Asked Spread. The difference between the price a dealer is willing to pay for a security (the bid price) and the somewhat higher price at which the dealer is willing to sell the same security (the ask price).

Capital Gains Distribution. Payment to mutual fund shareholders of gains realized on securities that a fund has sold at a profit, minus any realized losses.

Cash Investments. Cash deposits, short-term bank deposits, and money market instruments that include U.S. Treasury bills and notes, bank certificates of deposit (CDs), repurchase agreements, commercial paper, and banker's acceptances.

Common Stock. A security representing ownership rights in a corporation. A stockholder is entitled to share in the company's profits, some of which may be paid out as dividends.

Creation Unit. A large block of a specified number of ETF Shares. Authorized Participants may purchase and redeem ETF Shares from the issuing fund only in Creation Unit-size aggregations.

Dividend Distribution. Payment to mutual fund shareholders of income from interest or dividends generated by a fund's investments.

Ex-Dividend Date. The date when a distribution of dividends and/or capital gains is deducted from the price of a mutual fund or stock. On the ex-dividend date, the share price drops by the amount of the distribution (plus or minus any market activity).

Expense Ratio. The percentage of a fund's average net assets used to pay its expenses during a fiscal year. The expense ratio includes management expenses (such as advisory fees, account maintenance, reporting, internal accounting, legal, and other administrative expenses); any 12b-1 distribution fees; and "other" expenses (usually fees paid to independent third parties, such as the fund's custodian and auditor). It does not include the transaction costs of buying and selling portfolio securities.

Inception Date. The date on which the assets of a fund (or one of its share classes) are first invested in accordance with the fund's investment objective. For funds with a subscription period, the inception date is the day after that period ends. Investment performance is measured from the inception date.

Median Market Capitalization. An indicator of the size of companies in which a fund invests; the midpoint of market capitalization (market price x shares outstanding) of a fund's stocks, weighted by the proportion of the fund's assets invested in each stock. Stocks representing half of the fund's assets have market capitalizations above the median, and the rest are below it.

Mutual Fund. An investment company that pools the money of many people and invests it in a variety of securities in an effort to achieve a specific objective over time.

Passive Management. A low-cost investment strategy in which a mutual fund attempts to track—rather than outperform—a specified market benchmark or “index”; also known as indexing.

Principal. The face value of a debt instrument or the amount of money put into an investment.

Securities. Stocks, bonds, money market instruments, and other investments.

Total Return. A percentage change, over a specified time period, in a mutual fund's net asset value, assuming the reinvestment of all distributions of dividends and capital gains.

Volatility. The fluctuations in value of a mutual fund or other security. The greater a fund's volatility, the wider the fluctuations in its returns.

Yield. Income (interest or dividends) earned by an investment, expressed as a percentage of the investment's price.
